Dovecot

dovecot /etc/dovecot/conf.d/10-master.conf. "service auth" :

```
unix_listener auth-client {  
    mode = 0600  
    user = Debian-exim  
}
```

():

```
#default_process_limit = 100  
#default_client_limit = 1000
```

```
# Default VSZ (virtual memory size) limit for service processes. This is mainly  
# intended to catch and kill processes that leak memory before they eat up  
# everything.  
#default_vsz_limit = 256M
```

```
# Login user is internally used by login processes. This is the most untrusted  
# user in Dovecot system. It shouldn't have access to anything at all.  
#default_login_user = dovenull
```

```
# Internal user is used by unprivileged processes. It should be separate from  
# login user, so that login processes can't disturb other processes.  
#default_internal_user = dovecot
```

```

service imap-login {
    inet_listener imap {
        #port = 143
    }
    inet_listener imaps {
        #port = 993
        #ssl = yes
    }
}

# Number of connections to handle before starting a new process. Typically
# the only useful values are 0 (unlimited) or 1. 1 is more secure, but 0
# is faster. <doc/wiki/LoginProcess.txt>
#service_count = 1

# Number of processes to always keep waiting for more connections.
#process_min_avail = 0

# If you set service_count=0, you probably need to grow this.
#vsz_limit = $default_vsz_limit
}

service pop3-login {
    inet_listener pop3 {
        #port = 110
    }
    inet_listener pop3s {
        #port = 995
        #ssl = yes
    }
}

service lmtp {
    unix_listener lmtp {
        #mode = 0666
    }

    # Create inet listener only if you can't use the above UNIX socket
    #inet_listener lmtp {
    # Avoid making LMTP visible for the entire internet
    #address =
    #port =
    #}
    #}

    #process_limit = 1024
}

service pop3 {
    # Max. number of POP3 processes (connections)
    #process_limit = 1024
}

service auth {
    # auth_socket_path points to this userdb socket by default. It's typically
    # used by dovecot-lda, doveadm, possibly imap process, etc. Users that have
    # full permissions to this socket are able to get a list of all usernames and
    # get the results of everyone's userdb lookups.
    #
    # The default 0666 mode allows anyone to connect to the socket, but the
    # userdb lookups will succeed only if the userdb returns an "uid" field that
    # matches the caller process's UID. Also if caller's uid or gid matches the
    # socket's uid or gid the lookup succeeds. Anything else causes a failure.
    #
    # To give the caller full permissions to lookup all users, set the mode to
    # something else than 0666 and Dovecot lets the kernel enforce the
    # permissions (e.g. 0777 allows everyone full permissions).
    unix_listener auth-userdb {
        #mode = 0666
        #user =
        #group =
    }
}

```

```
# Postfix smtp-auth
#unix_listener /var/spool/postfix/private/auth {
# mode = 0666
#}

# Auth process is run as this user.
#user = $default_internal_user
  unix_listener auth-client {
    mode = 0600
